BLOOMING BRITISH

AFTERNOON TEA

A celebratory afternoon tea with the Natural History Museum

Supporting a future where people and pollinators thrive

Natural History Museum

ROYAL LANCASTER LONDON

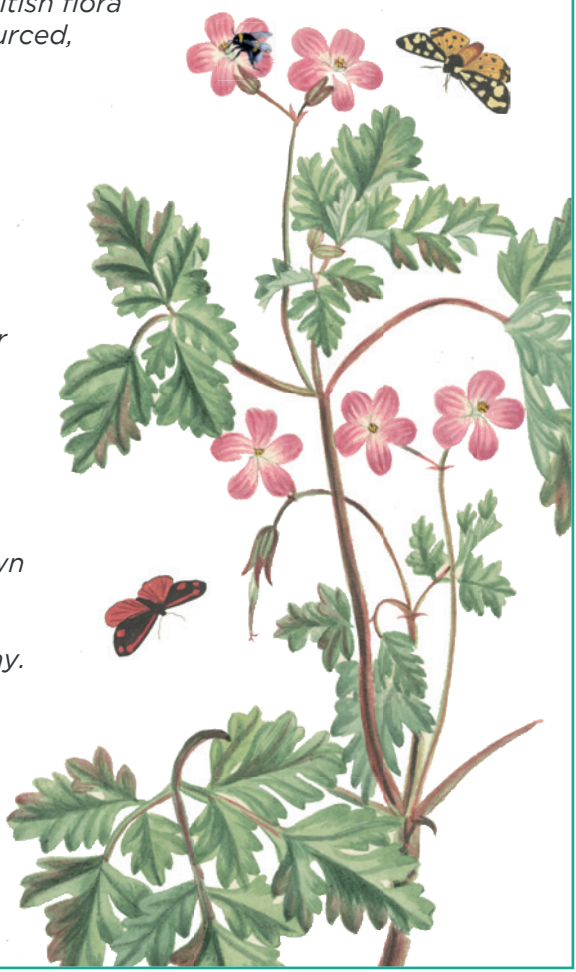
Introduction

Welcome to A Blooming British Afternoon Tea in collaboration with the Natural History Museum; a floral-inspired twist on a quintessentially British tradition, in a celebration of the beautiful flowers and precious pollinators on our doorstep.

Taking inspiration from artworks held within the Museum's archives, their newly transformed gardens that provide a haven for people and wildlife, and the idyllic 30-minute nature walk across leafy Hyde Park that brings us together, our talented pastry team have created a thoughtful menu that beautifully honours the elegance of British flora and fauna, using locally-sourced, seasonal ingredients.

This special collaboration combines the Museum's expertise and work to protect the natural world, with our ongoing sustainability efforts, and a shared passion for pollinators. Royal Lancaster London has been home to thousands of honey bees since 2009 when we became the first hotel in central London to install beehives on our roof; an initiative led by our very own Queen Bee, Jo Hemesley, who continues to lead our beekeeping team to this day.

Together, we support a future where people and pollinators thrive.



Prices

£49 Monday to Friday

£55 Saturday and Sunday

£30 Children's Afternoon Tea

Make it extra special...

£15 *Nyetimber Classic Cuvee MV*
£18 *Nyetimber Rosé MV*

£16 *Taittinger Brut Reserve NV, France*
£20 *Taittinger Brut Prestige Rose NV, France*

£10 *Noughty Sparkling Chardonnay non-alcoholic sparkling wine*
£10 *Noughty Sparkling Rose non-alcoholic sparkling wine*

Bespoke Teas

from Camellia's Tea House

The Royal Lancaster Afternoon Blend

A bespoke blend created to complement the savoury selection of our celebratory afternoon tea. An unusual combination of timeless English Breakfast, warm woody China Keemun with the floral notes of calming chamomile. This is a tea to relax with and savour time well spent with friends and loved ones.

The Pollinator Blend

Created exclusively for Royal Lancaster London, in partnership with the Natural History Museum, the Pollinator blend marries black teas from Darjeeling and China with cornflower, rose and marigold petals and the final flourish of organic bee pollen. Full of health-giving properties, the bee pollen adds a sweet honeyed note to this delightful celebration of the insects which keep Mother Nature in timeless bounty.

Light vanilla mousse, caramelised apple, sablé Breton

Chocolate Seedball
Milk chocolate mousse, chocolate sponge

Butterflies & Berries
Vanilla cheesecake, mixed red berry compôte

A discretionary 12.5% service charge will be added to your bill.

Did you know...?

While honeybees get a lot of the credit, at least 1,500 insect species pollinate plants in the UK. In some parts of the world, birds, bats and even lizards get involved too!

Adult butterflies and moths will feed on almost any flower's nectar, but caterpillars are fussier, so try planting a variety of flowers to encourage more insects to visit your garden.

For an animal to be an effective pollinator it needs to actively visit flowers of the same species and be capable of carrying pollen on its body (often unintentionally) so that it transfers from one flower to another.

Beetles are attracted to flat, open flowers which allow them to graze, and flowers in clusters, such as cow parsley. The flowers tend to be smelly or fragrant, because beetles navigate by a strong sense of smell.

There are just 57 resident butterfly species in the UK, compared to more than 2,500 moth species.

Things you can do to help:

1. Grow pollinator-friendly plants in your garden or on your windowsill
2. Let your lawn grow a little wilder
3. Build a home for solitary bees

Cereals, such as wheat and barley, rely on wind pollination but just about every other plant we eat is actively pollinated. Tomato production relies on pollination by bumblebees, as do many other crops.

The list of insect pollinators is long and includes many different species of bees, flies, wasps, beetles, butterflies and moths. Pollinators carry pollen with them as they move from flower to flower.
